## EDUCATION

### Gujarat Technological University

CGPA - 8.83

Bachelor of Engineering in Electronics and Communication

Aug. 2018 – May. 2022

## WORK EXPERIENCE

### Founding Engineer - Frontend

Hybr1d

August 2022 - Present

- Built multiple significant modules like inventory, teams, notifications that are leveraged by 95% of the customer base.
- Revamped the product's landing page using Nextjs, focusing on performance and best code practices.
- Refactored backend utilities modules for better code understanding and majorly worked on fixing backend bugs.
- Worked on building the internal UI library and other core modules based on the new design system, ensuring both stability and flexibility of the components.
- Built multiple integrations like Vercel, Freshservice, Dropbox and Datadog as a part of our SAAS visibility offering.

### SDE Intern - Frontend

FloBiz

March 2022 – August 2022

- Used Angular to build features, such as, uploading image, blocking users and settlements, uploading greetings and business cards on the admin panel of myBillBook.
- Had a major contribution in the building of online store for the customers of myBillBook. An example of how the online store looks like.
- Built up online store's authentication, search functionality, popups, checkout tabs, etc. and made it mobile responsive.

### Frontend Developer Intern

Subcircle

April 2021 – March 2022

- Built a responsive and customizable portfolio, generated dynamically using information provided by the user.
- Utilized VueJS to build components responsible for setting up and creating a Club to organize meetups and workshops.
- Developed functionality for creating Project and Project Plan where users can create a project and distribute the project into different parts using Project Plan.
- Built the Frontend for Go Play, whose main features include Color Picker (picking color from an image) and a Quiz for cosmetic enthusiasts to help them identify what shade suits them the best.
- Developed the Frontend for Talk Israel. A news company specifically focused on events happening in Israel.
- Translated UI/UX wireframes to pixel-perfect, mobile responsive user interfaces and successfully shipped two client projects.
- Had a major contribution in developing Upswells and Subcircle.

## PROJECTS

**Gravity** | *Typescript, NextJS, Zustand, NodeJS, Apollo(Client & Server), Prisma, PostgreSQL, TailwindCSS*

Frontend || Backend || Live Preview (New Version)

- Developed a full stack application imitating the popular social media app - Reddit.
- Used Nodejs, Apollo Server and Prisma as backend framework to develop authentication and CRUD functionality for the app.
- Implemented Frontend using NextJS, Zustand and tailwindcss while adhering to best development practices.
- This project was just another attempt to build the application that would someday "Go to the moon" ;)

## LANGUAGES AND TECHNOLOGIES

- JavaScript, Typescript, Python; React, Redux, Vue, Angular, Node, Express, Jest; MongoDB, PostgreSQL, Sequelize, Prisma, Mongoose, GraphQL; Git
